LOUISIANA WEEKLY CLIMATE SUMMARY

Volume 2, Issue 45

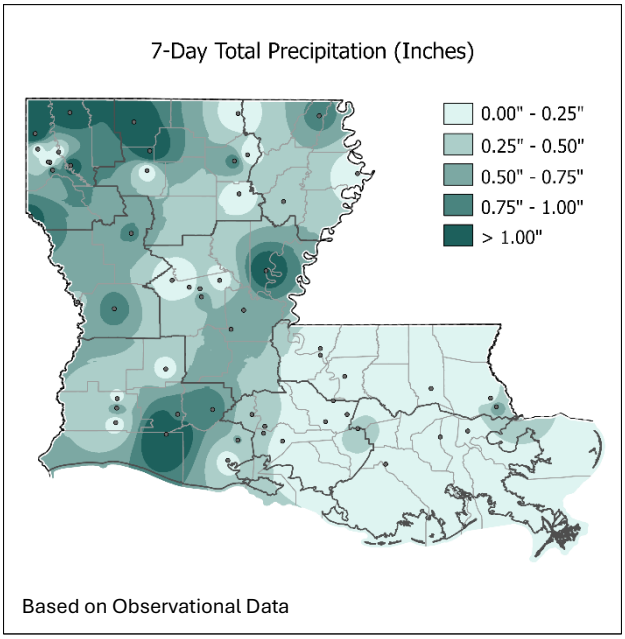

November 04 – November 10, 2026

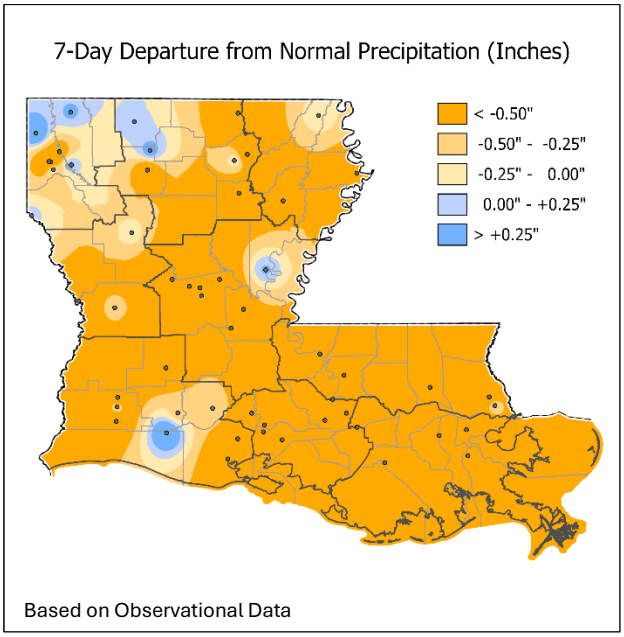

** PROVISIONAL DATA*

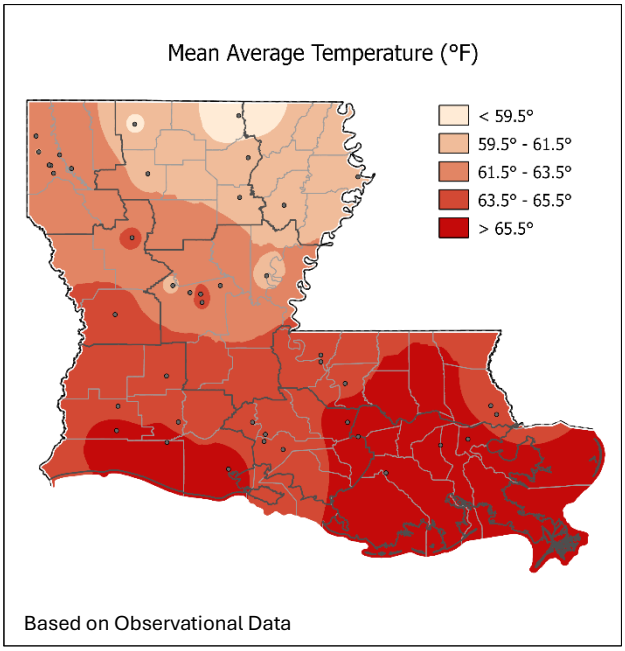

Louisiana Office of State Climatology
Louisiana State University
lastateclimate@lsu.edu
225-578-6870

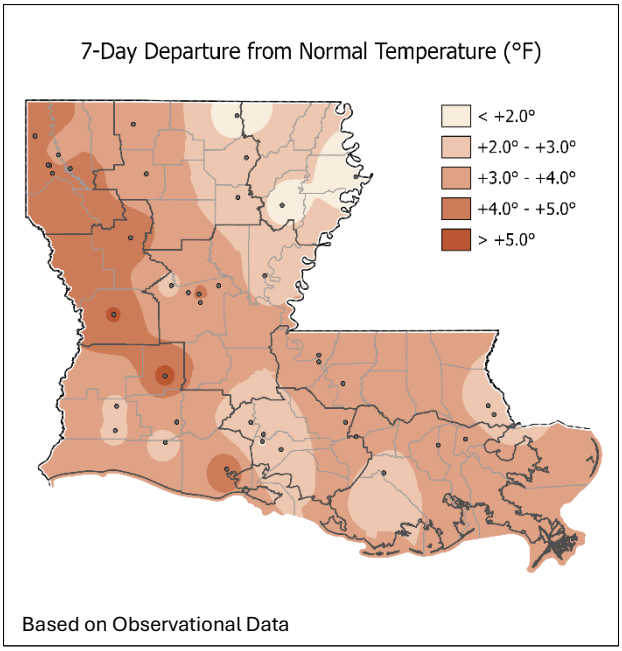

7-Day Accumulated Rainfall & Average Temperatures: 04 - 10 Nov 2026

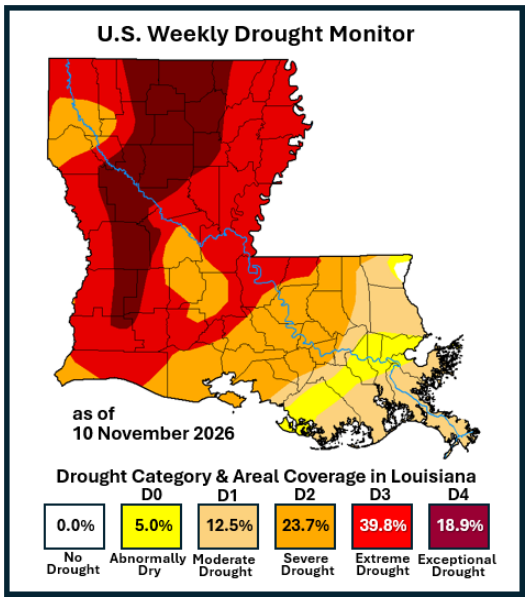

- the 7-day period began with a frontal passage and lingering rains over southeastern Louisiana; a second front on Nov 6 yielded no moisture and the period remained dry until Nov 9-10 when rains moved into southern Louisiana in association with an upper-level disturbance
- much of the state reported below-normal rain totals for the 7 days; however, per 24-hour weather reporting convention, some stations show rain on Nov 4 that actually fell on Nov 3
- the lack of significant rains led to drought intensification across the state per the ***US Drought Monitor*** (p. 3)

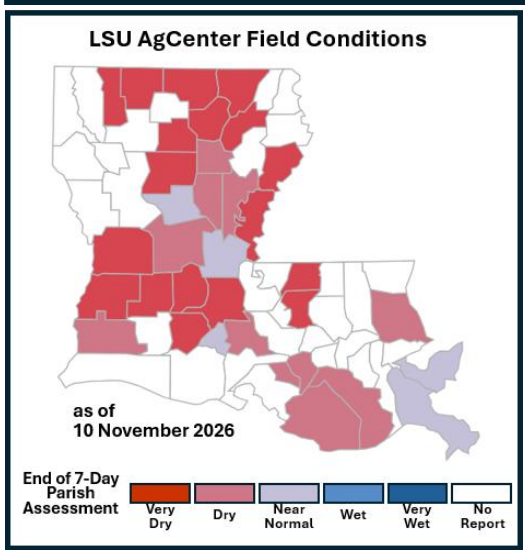

- temperatures were once again well-above 7-day normals despite a brief cooldown following the Nov 6 'cold' front passage
- drier air in place led to a wide range between daily maximum and minimum temperatures with some divisions averaging more than a 25°F difference between the two
- the statewide maximum was 86°F at Leesville (WC Div), reported on Nov 7; the statewide minimum was 33°F at the Slidell NWS Co-op station, recorded on Nov 5

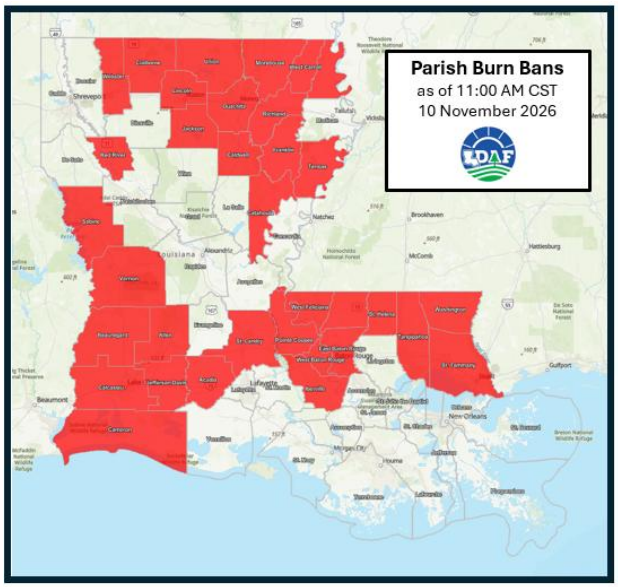

Louisiana Office of State Climatology

225-578-6870

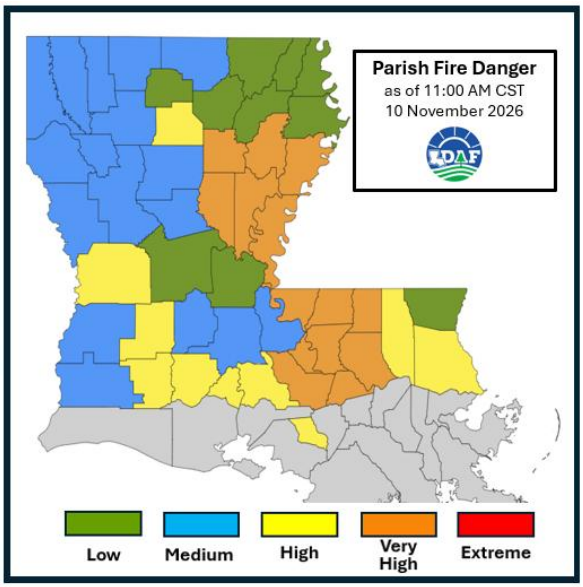

U.S. Drought Monitor (USDM): Issued November 12, 2026
- includes data thru November 10

- the 7-day period was drier-than-normal for most of the state, even with rains reported on Nov 4, Nov 9, and Nov 10
- despite a brief cooldown following a frontal passage on Nov 6, 7-day average temperatures remained well-above normal and humidities were also low, leading to above-normal moisture demand (ETo) for this time of year
- due to the mostly dry and warm conditions, the updated weekly ***U.S. Drought Monitor*** depiction showed an increase in 'Exceptional' Drought' (D4) coverage across northcentral Louisiana, along with expansion of 'Extreme Drought' (D3), 'Severe Drought' (D2), and 'Moderate Drought' D1 across the southern parishes
- as of Nov 10, all but a handful of reporting LSU AgCenter parish agents reported 'Dry' or 'Very Dry' conditions in their respective parishes; 9 agents reported improved conditions but all other agents reported degraded conditions or conditions similar to the prior week
- as of Nov 8, the USDA noted 'Short' or 'Very Short' topsoil and subsoil conditions for 87% of the state
- as of Nov 10th, 34 parishes had burn bans in effect; Parish Fire Danger levels improved slightly, down to 23 parishes listed as 'High' to 'Very High' with no parishes ranked as 'Extreme' compared to 30 parishes posted as 'High' to 'Extreme' Danger on Nov 3rd

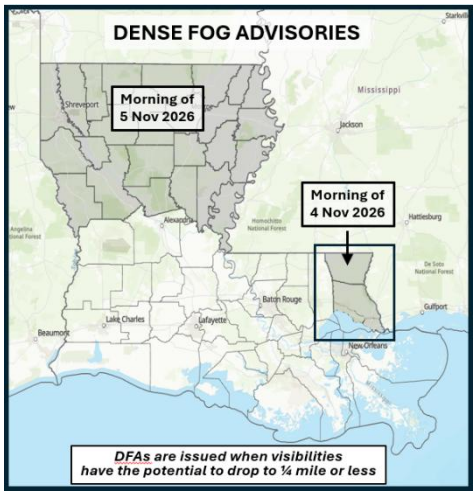

Parish ***Burn Bans*** are issued and lifted by local designated agencies and/or officials. ***Daily Fire Danger*** maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

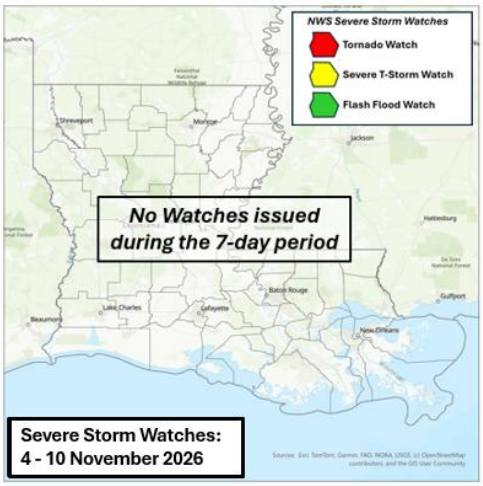

Louisiana Office of State Climatology

lastateclimate@lsu.edu
225-578-6870

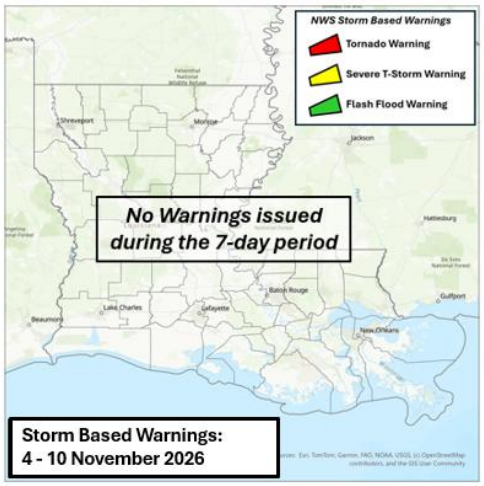

Severe/Stormy Weather:

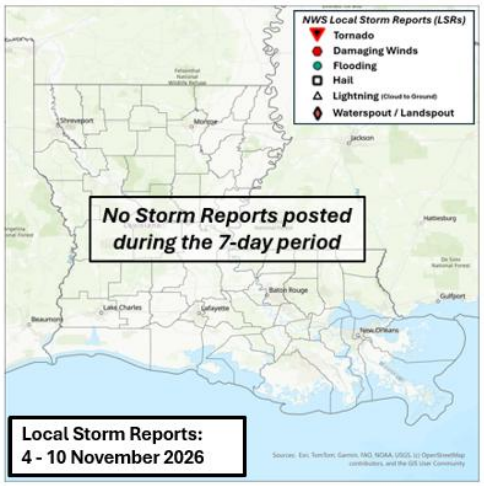

There were no *Watches* or *Warnings* issued during the 7-day run, nor were there any *Local Storm Reports* posted by the NWS offices. A 'cold' front passage during the middle of the period was dry and an upper-level system that moved into the state later in the period was relatively benign.

However, *Dense Fog Advisories* were issued by three of the four National Weather Service offices serving Louisiana: for 2 east-central parishes on the morning of Nov 4, and across the northern half of the state on the morning of the 5th.

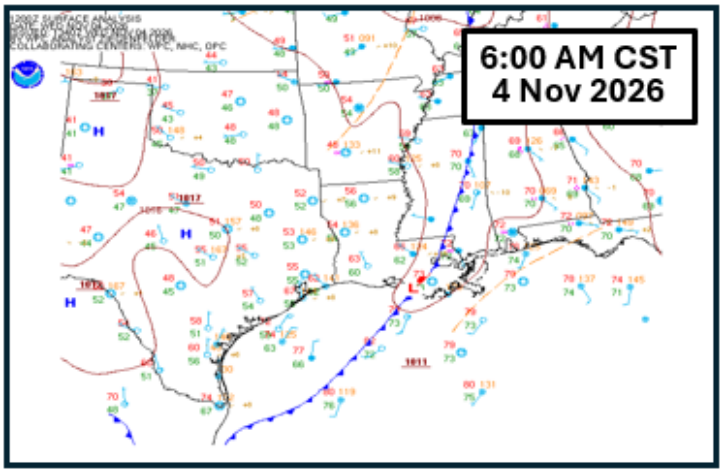

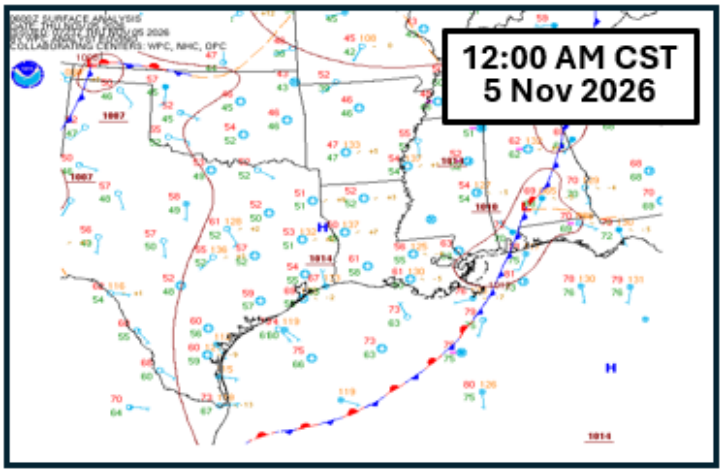

Tornado Reports: 04 - 10 November 2026 *(Preliminary)*

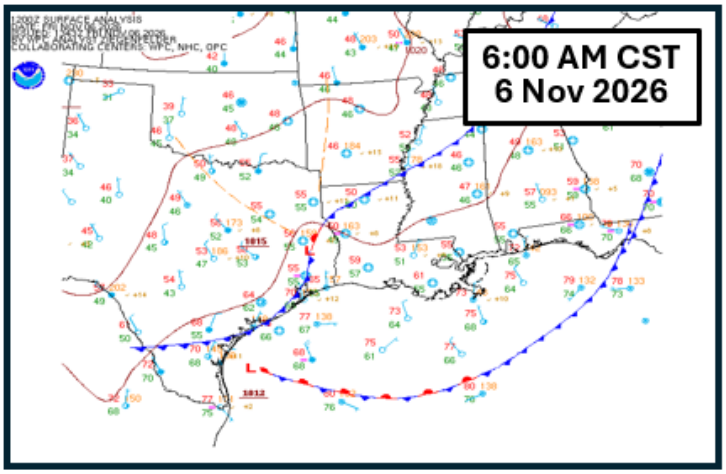

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

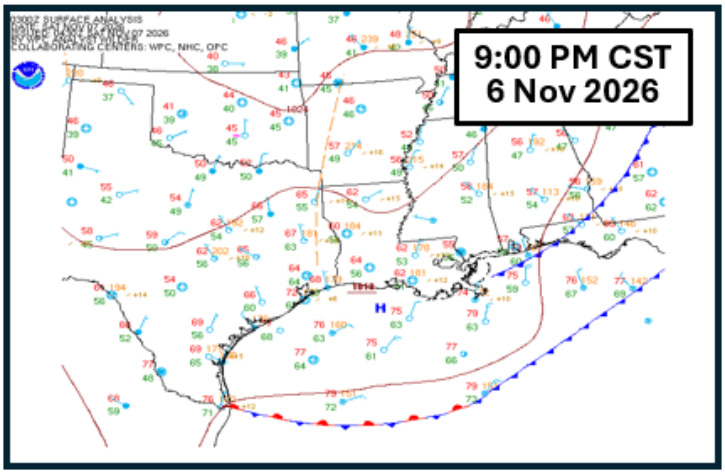

Prop Dmg: Structural Damage

T - Temperature (^{0}F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Divisional & Statewide Averaged Data:

The LOSC's divisional data are developed as guideline regional values. Divisional temperature and precipitation data are calculated using any/all data available within the division at the time of newsletter posting. This is different from the approach used by NCEI/NCDC, which calculates divisional values using only those stations within the division that report both daily temperature and rainfall.

The LOSC's statewide averages are also a guideline number based on the arithmetic average of the temperature and divisional values derived for the nine climate divisions. This also differs from the NCEI/NCDC approach, which incorporates spatial weighting (divisional size) as part of the statewide calculation.

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
