225-578-6870

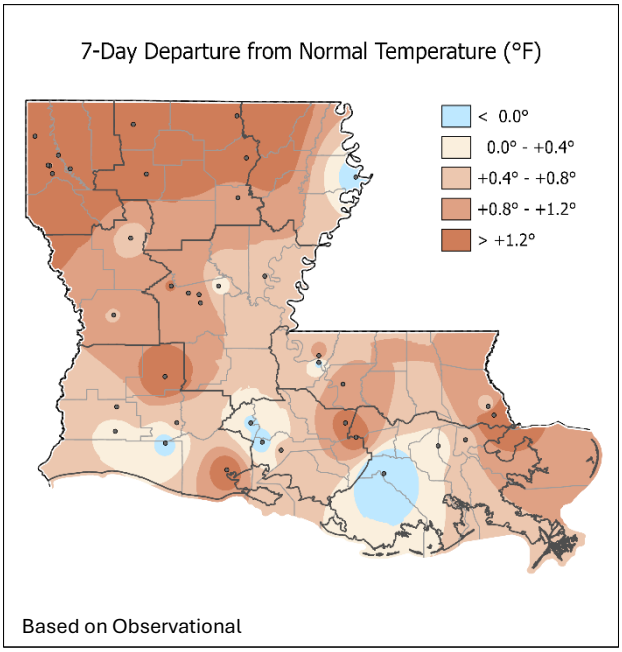

7-Day Accumulated Rainfall & Average Temperatures: 05 - 11 Aug 2026

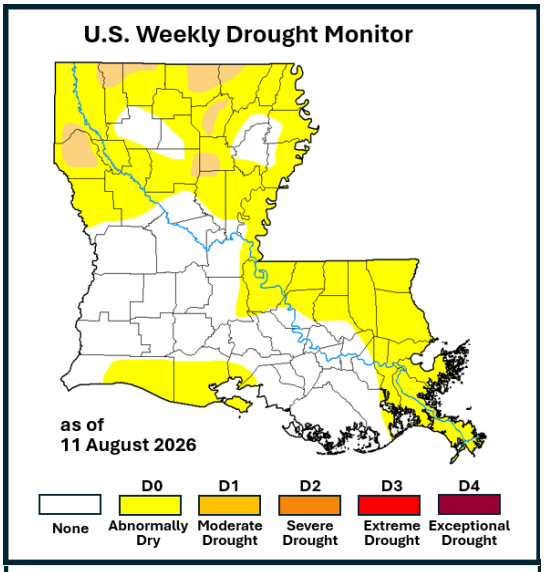

- it was a typical summertime pattern during the 7-day stretch; storms began near the coast each morning and moved inland during the day, generally increasing in coverage as they did
- rainfall was seasonably spotty but most of the state received amounts just on either side of 7-day normals
- despite the spotty rains, hydrological conditions continued to deteriorate across the state leading to an increase in drought coverage per the ***U.S. Weekly Drought Monitor*** (p. 3)

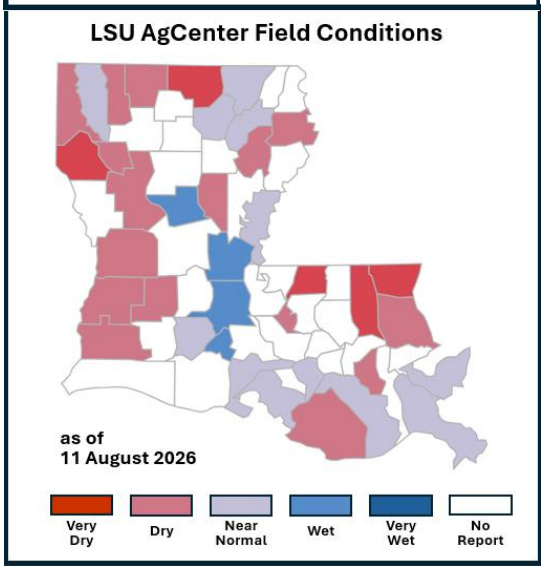

- average temperatures were generally above 7-day normals, particularly across northern Louisiana
- SHV Southern Hills and Monroe MLU AP each reached 100°F during the period; average daily maximum temperatures averaged in the low-90°s across southern Louisiana and the mid-90°s in northern Louisiana

U.S. Drought Monitor (USDM): Issued August 13, 2026

- includes data thru August 11

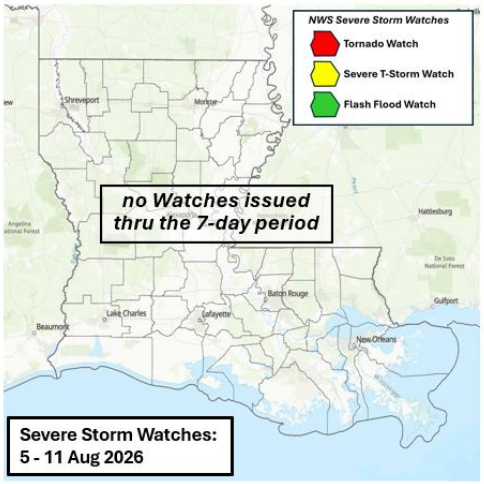

- it was a typical summertime pattern during the 7-day monitoring period across the Bayou State; daily convection would initiate along the coast and move inland through the course of the day, coverage was seasonally spotty with most locations reporting amounts just above or just below 7-day normals
- unfortunately, hydrological conditions continued to deteriorate throughout the state as noted by decreased soil moisture content, vegetative stress, and declining streamflows; even areas that are still 'normal' are nearing dryness
- for the second consecutive week, the new ***U.S. Drought Monitor*** depiction showed degradations; 'Moderate Drought' (D1) spread across northern Louisiana and 'Abnormally Dry' (D0) coverage expanded across northern and southeastern Louisiana
- As of Aug 11, 'Very Dry' conditions were reported by 5 LSU AgCenter field agents, another 16 reported 'Dry' conditions; areas that were reported as 'Near Normal' or 'Wet' were the rainfall "lottery winners" during the period; a little less than half of the agent reports noted that conditions had 'Slightly' or 'Significantly' degraded in their respective parishes during the period
- as of Aug 10, the USDA noted 'Short' or 'Very Short' topsoil and subsoil conditions for 64% and 59% of the state, respectively; pasture and range conditions were noted as 'Fair', 'Poor', or 'Very Poor' for 51% of the state
- as of Aug 11, 5 parishes are under 'Burn Bans' while Parish Fire Danger levels are now listed as 'Very High' or 'High' for most monitored parishes

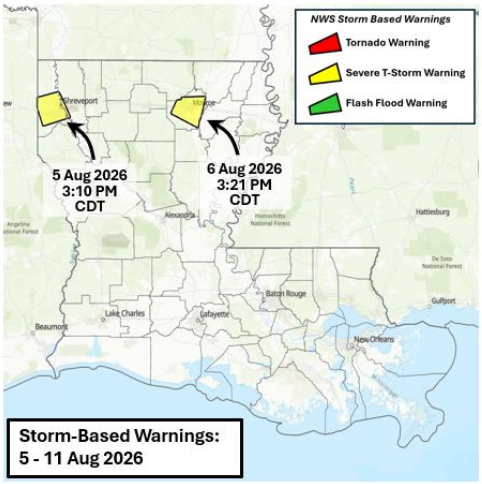

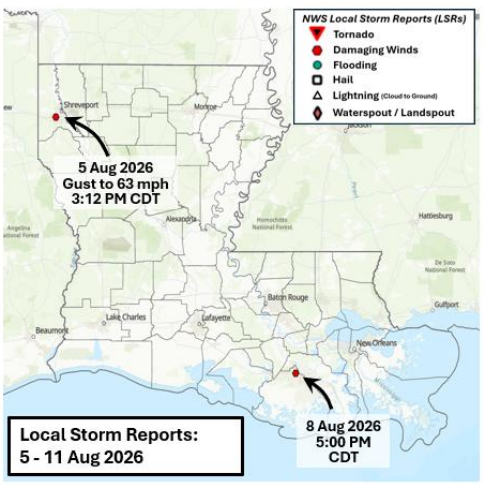

Parish ***Burn Bans*** are issued and lifted by local designated agencies and/or officials. ***Daily Fire Danger*** maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

Severe/Stormy Weather:

Despite near-daily coverage of scattered storms around the state, it was a "quiet" 7-day period in terms of severe weather. There were no frontal passages and no disturbances of note moved through the state. No *Watches* were issued during the period, and only two *Severe Thunderstorm Warnings* were posted during the stretch over northern Louisiana: one the afternoon of Aug 5 and another on the afternoon of Aug 6.

A 63 mph wind gust was recorded at Shreveport SHV AP on Aug 5. The *Local Storm Report* from Aug 8 noted a downed power line from thunderstorm winds in the Gray area near Houma.

While no *Flash Flood Warnings* were issued during the period, localized downpours did prompt the issuance of *Flood Advisories* for a few locations around the state between the 5th and the 7th. Additionally, *Heat Advisories* were also issued for a number of Louisiana communities on August 10th and 11th.

Tornado Reports: 5 - 11 Aug 2026 *(Preliminary)*

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

Prop Dmg: Structural Damage

- Temperature (^{0}F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
