LOUISIANA WEEKLY CLIMATE SUMMARY

Volume 2, Issue 41

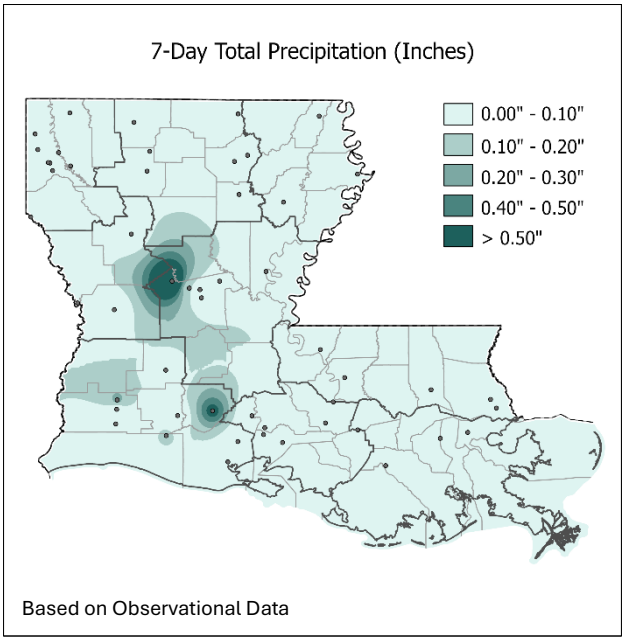

October 07 – October 13, 2026

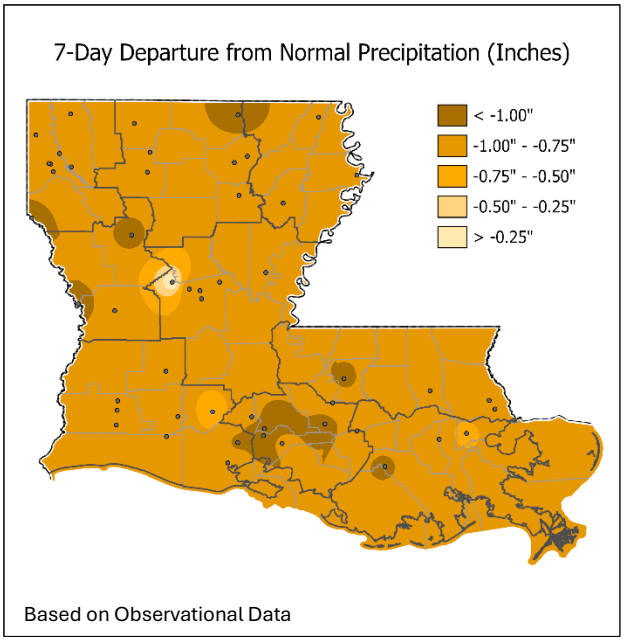

** PROVISIONAL DATA*

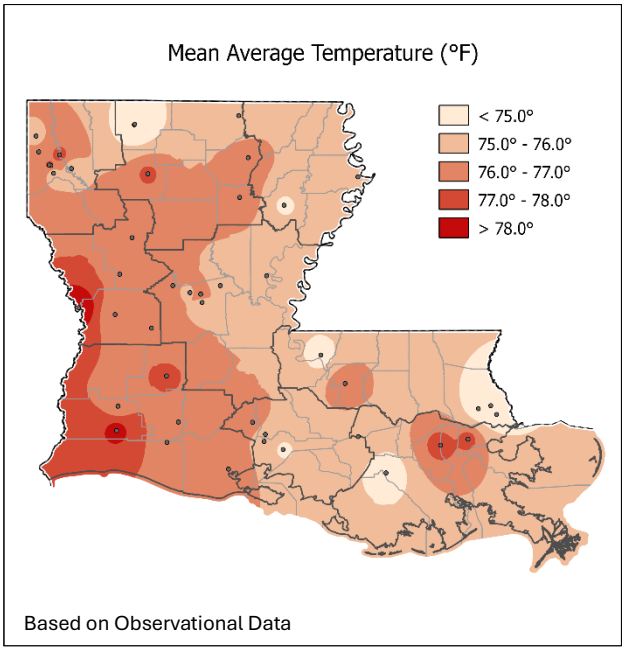

Louisiana Office of State Climatology
Louisiana State University
lastateclimate@lsu.edu
225-578-6870

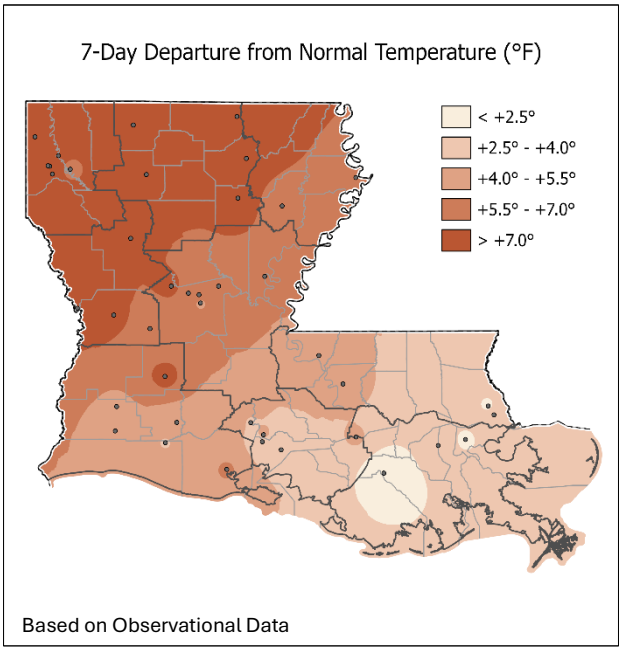

7-Day Accumulated Rainfall & Average Temperatures: 07 - 13 Oct 2026

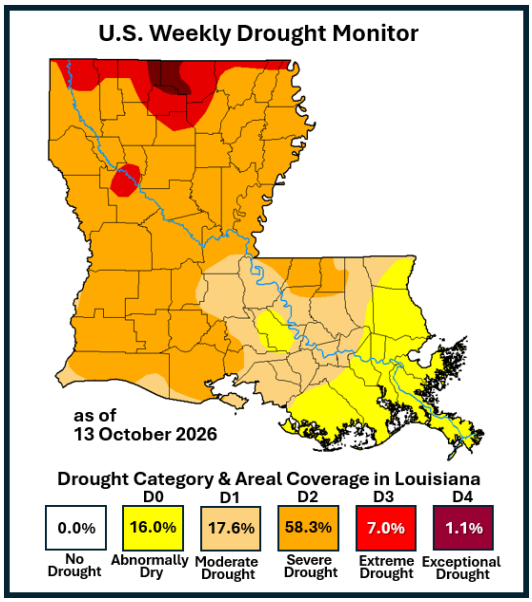

- conditions were dry during the 7-day run as Hurricane Isaias formed in the Gulf but moved to the east of the state; many reporting stations didn't record any precipitation (pp. 5-8)
- Isaias's precipitation missed the state to the east and the northerly flow from it brought dry air from the north, there were no frontal passages during the period
- the lack of precipitation combined with low humidities led to increased drought coverage across the state per the ***U.S. Drought Monitor*** (p. 3)

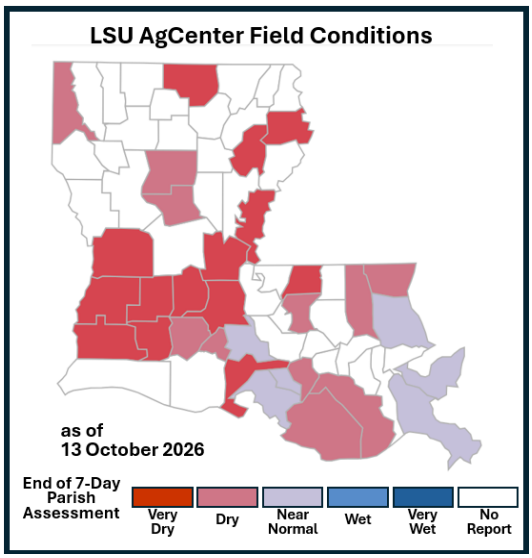

- temperatures were well above-normal during the period as a lack of precipitation and cloud cover allowed for maximum daytime heating, no fronts moved through the state
- many reporting stations recorded highs in the 90°s for multiple days
- the statewide maximum temperature during the period was 96°F and was recorded at several stations

U.S. Drought Monitor (USDM): Issued October 15, 2026
- includes data thru October 13

- Hurricane Isais's precipitation missed the state to the east and northerly flow around it brought dry air from the north, effectively cutting off any chance of precipitation and also reducing humidities
- average temperatures continued to be above-normal with many locations reporting highs in the 90°s for several days with abundant sunshine, leading to a high rate of evaporation and the continuing drying-out of soils
- due to the aforementioned conditions, the updated weekly ***U.S. Drought Monitor*** depiction showed an increase in drought coverage across the state, including the introduction of D4 'Exceptional' drought in north-central Louisiana, the first time there has been any D4 in the state since late-January 2024
- the majority of LSU AgCenter parish agents across the state noted 'Dry' or 'Very Dry' conditions in their respective parishes; most also noted that conditions had 'Slightly' or 'Significantly' degraded during the 7-day monitoring period
- as of Oct 11, the USDA noted 'Short' or 'Very Short' topsoil and subsoil conditions for 79% and 77% of the state, respectively; pasture and range conditions were noted as 'Fair', 'Poor', or 'Very Poor' for 67% of the state
- as of Oct 13, most parishes in central, western, and northern Louisiana were under 'Burn Bans'; Parish Fire Danger levels were listed as 'High' or 'Very High' for the majority of northern parishes

Parish ***Burn Bans*** are issued and lifted by local designated agencies and/or officials. ***Daily Fire Danger*** maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

Severe/Stormy Weather:

Given the dry spell, it comes as little surprise that no *Severe Storm Watches* or *Warnings* were posted for Louisiana during the 7-day stretch.

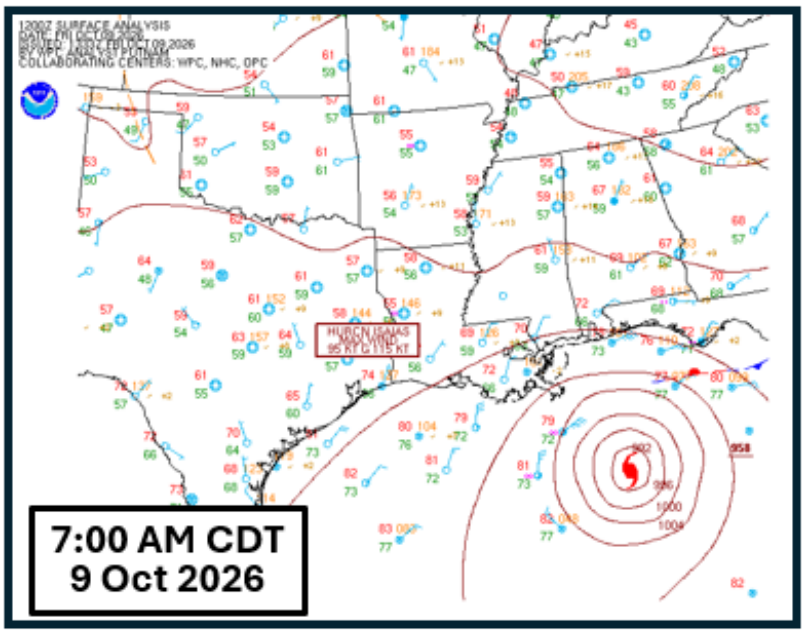

Fortunately for Louisiana, Hurricane Isaias missed the state as it tracked across the northern Gulf to the south, southeast, and east. However, the hurricane did get close enough to prompt the posting of various tropically-related *Watches* & *Warnings* (not shown).

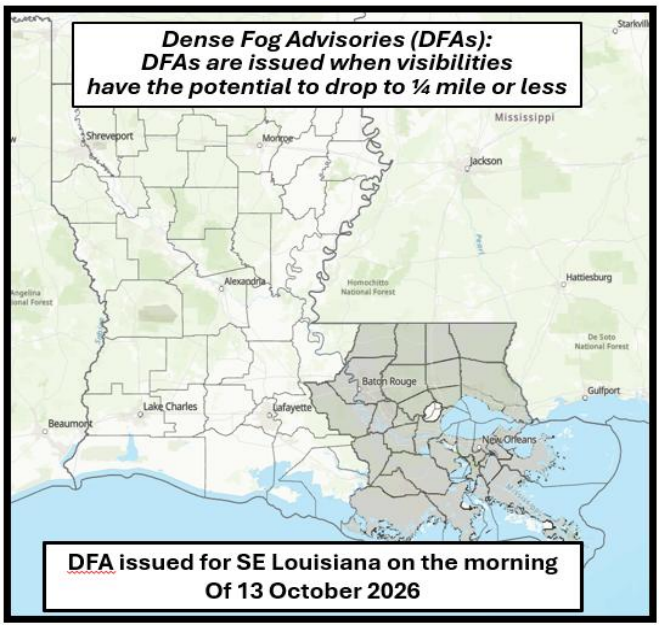

A *Dense Fog Advisory* was issued by NWS/Slidell for southeastern Louisiana for the morning of Oct 13.

- Temperature (^{0}F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
