LOUISIANA WEEKLY CLIMATE SUMMARY

Volume 2, Issue 33

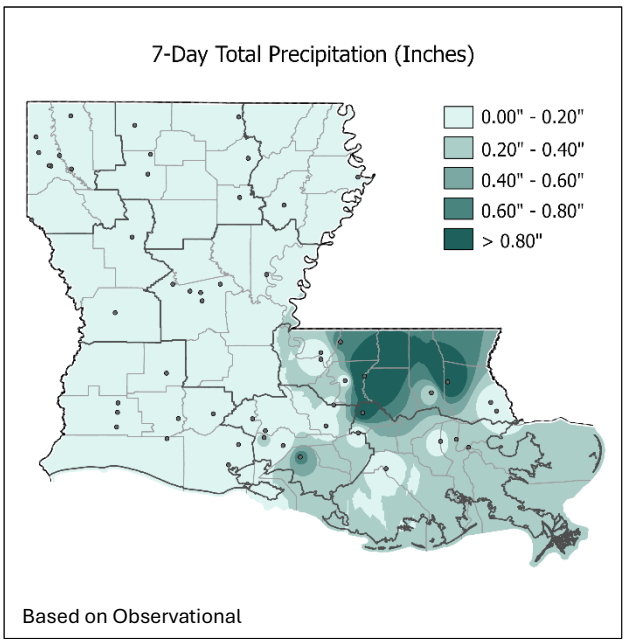

August 12 – August 18, 2026

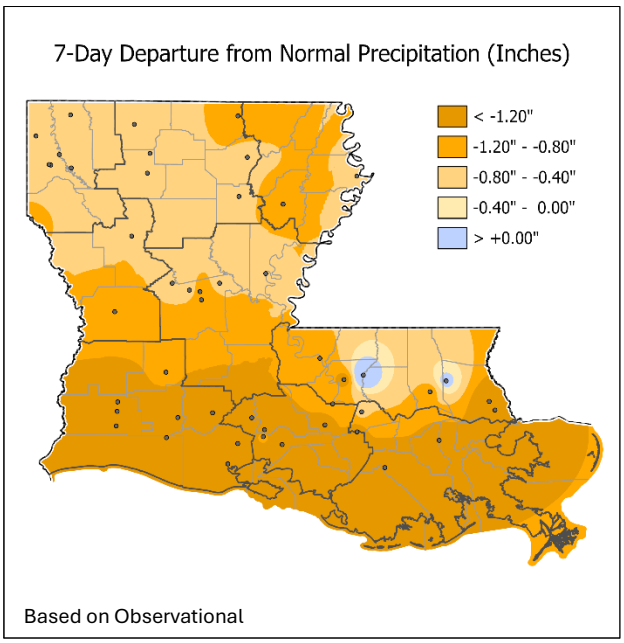

** PROVISIONAL DATA*

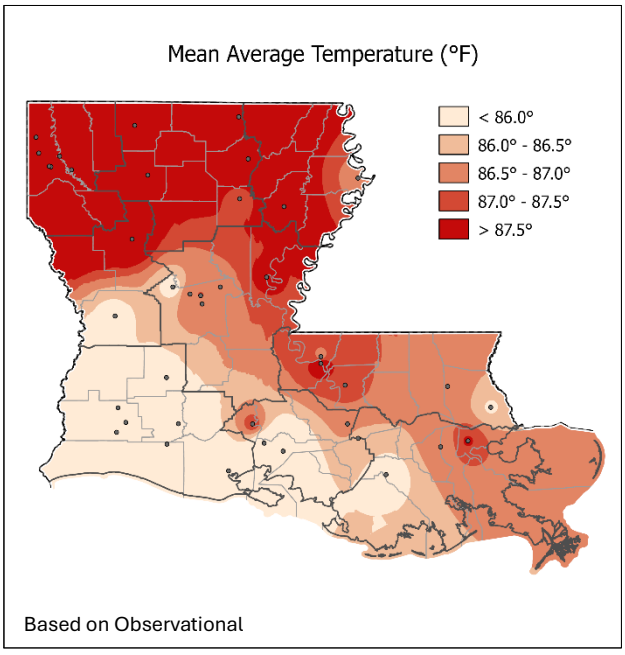

Louisiana Office of State Climatology
Louisiana State University
lastateclimate@lsu.edu
225-578-6870

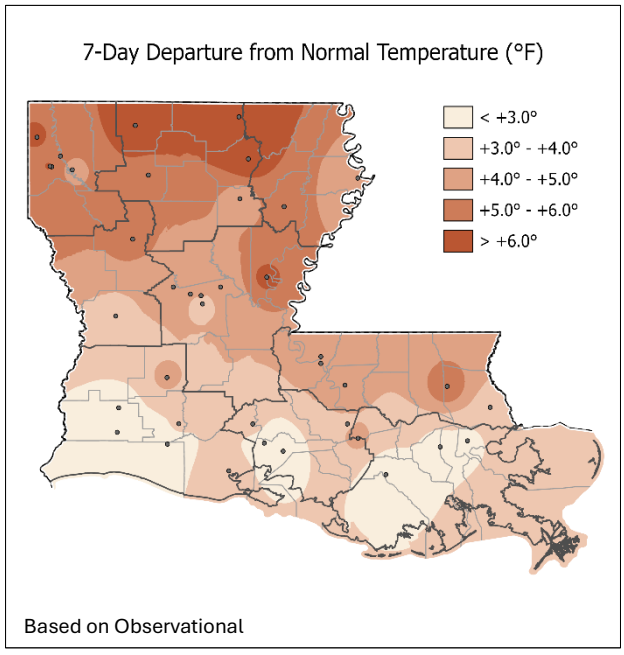

7-Day Accumulated Rainfall & Average Temperatures: 12 - 18 Aug 2026

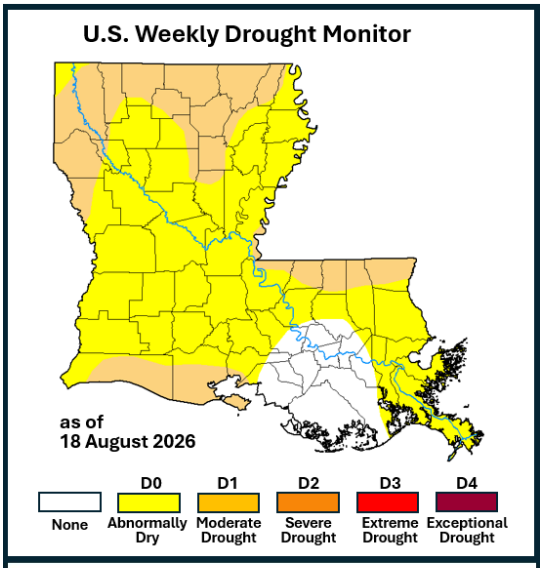

- rainfall was limited during the 7-day run as high pressure was in control; only portions of southeastern Louisiana received any appreciable amounts, many locations recorded no rain (pp. 5-8)
- outside of a couple of isolated locations, rainfall was significantly below-normal across the state, continuing the pattern of recent weeks
- the lack of rain coupled with the very hot conditions continued a rapid dry-out that is now beginning to appear in the ***U.S. Drought Monitor*** (p. 3)

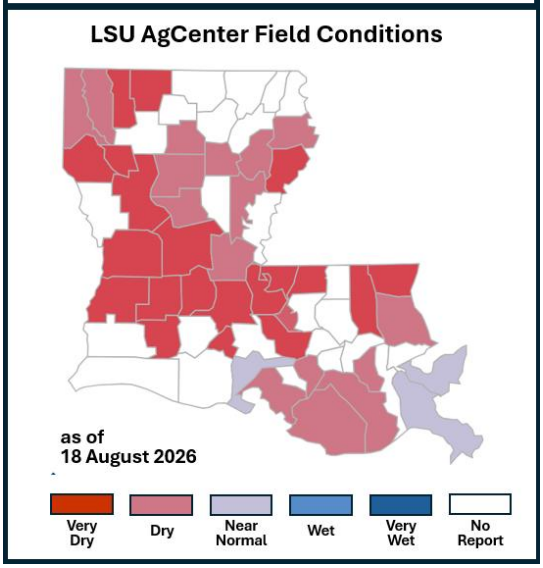

- average temperatures were significantly above-normal during the 7-day period, driven primarily by high temperatures soaring with high pressure in control and an associated lack of cloud cover
- all but the 3 southern climate divisions had at least one station reach 100°F, including a statewide maximum of 105°F at Monroe 26 N and Monroe MLU AP; the average daily high temperature for the 3 northern divisions exceeded 100°F
- several daily high temperature records were tied or broken towards the end of the period

Louisiana Office of State Climatology
Louisiana State University

225-578-6870

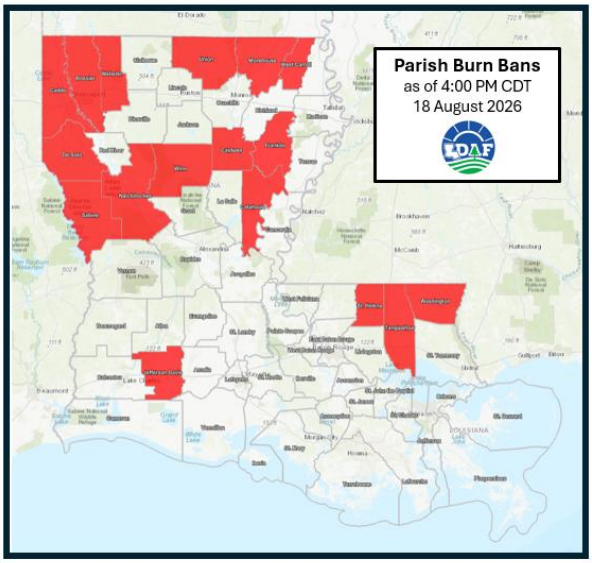

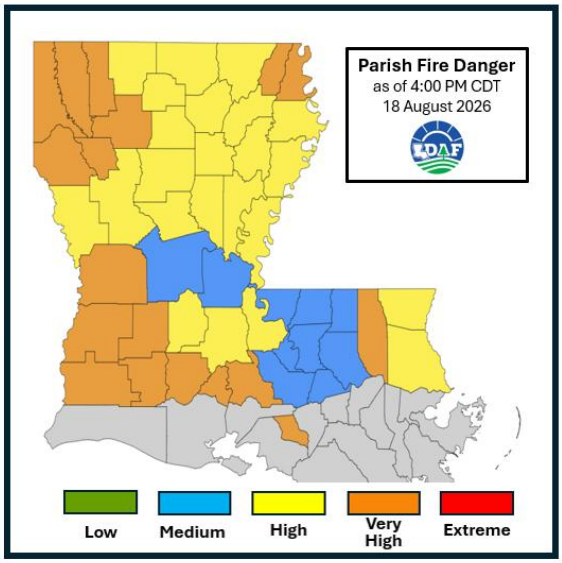

U.S. Drought Monitor (USDM): Issued August 20, 2026

- includes data thru August 18

- it was another 7-day run of dry and hot conditions for the Bayou State as a persistent dome of high pressure suppressed most daily convection; mostly sunny skies allowed daytime highs to soar, sending temperatures well above 7-day normals
- the recent stretch of much drier- and hotter-than-normal conditions has led to a rapid dry-out that is being referred to as 'Rapid Onset Drought' or 'Flash Drought', what limited soil moisture that does exist is being quickly depleted; vegetation is browning and streamflows are diminishing; impacts are now being felt across a wide spectrum of sectors
- for the third consecutive week, the updated ***U.S. Drought Monitor*** depiction shows drought expansion, with a significant increase in 'Moderate Drought' (D1) coverage across northern Louisiana and new D1 coverage across southwestern and east-central Louisiana; most of the remainder of the state is rated as 'Abnormally Dry' (D0)
- As of August 18th, all but 3 LSU AgCenter field agents noted 'Very Dry' or 'Dry' conditions in their respective parishes; most noted that conditions had 'Slightly' or 'Significantly' degraded in their parishes during the period
- as of Aug 17th, the USDA noted 'Short' or 'Very Short' topsoil and subsoil conditions for 75% and 69% of the state, respectively; pasture and range conditions were noted as 'Fair', 'Poor', or 'Very Poor' for 56% of the state
- in response to the hot and dry conditions, several parishes have recently enacted 'Burn Bans', bringing the total number to 17 as of the afternoon of Aug 18; fire conditions are noted as being 'High' or 'Very High' for most monitored parishes

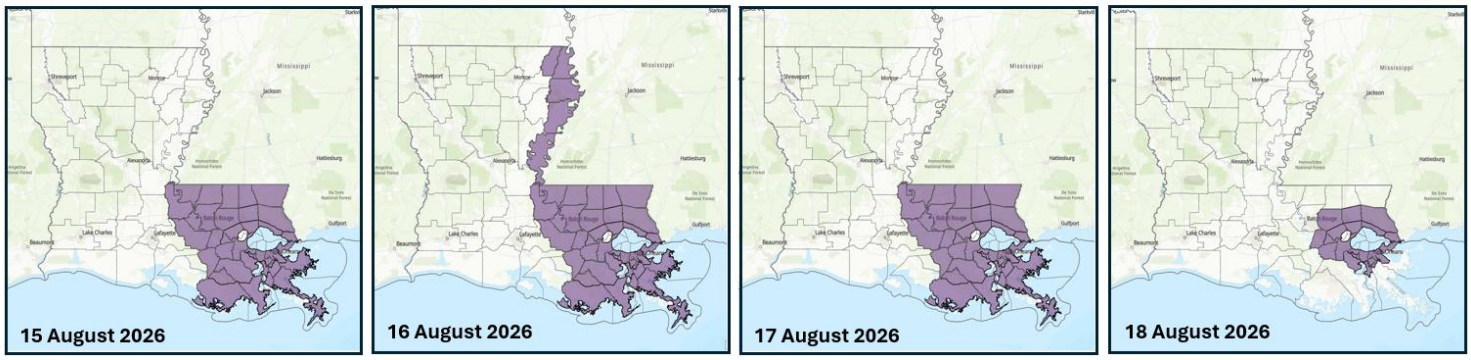

Parish ***Burn Bans*** are issued and lifted by local designated agencies and/or officials. ***Daily Fire Danger*** maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

12 -18 August 2026 *Extreme Heat Warnings*

Severe/Stormy Weather:

With high pressure in control and a lack of daily storm coverage, warnings were few and far between. A *Severe Thunderstorm Warning* was issued the afternoon of Aug 16 for Washington Parish, and another was issued the next day for Tangipahoa Parish. Neither of those severe storms yielded a *Local Storm Report*.

There were no *Tornado* or *Flash Flood Warnings* during the period.

With the increase in heat and seasonably high humidity, several *Heat Advisories* were issued during the period. The Slidell NWS Forecast Office (LIX) issued *Extreme Heat Warnings* for at least some portion of their Warning Area on four consecutive days: August 15, 16, 17, and 18. The Jackson, MS NWS Forecast Office (JAN) also got into the act and issued an *Extreme Heat Warning* for August 16.

Tornado Reports: 12 - 18 August 2026 *(Preliminary)*

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

Prop Dmg: Structural Damage

- Temperature (^{0}F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
