225-578-6870

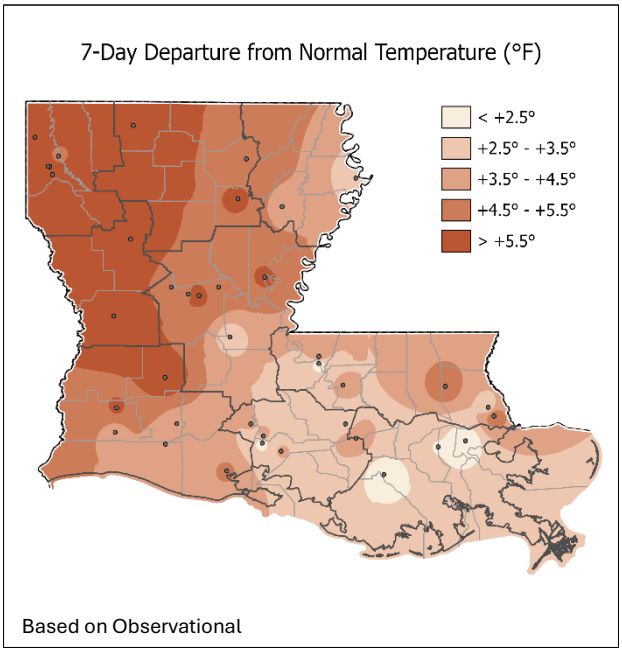

7-Day Accumulated Rainfall & Average Temperatures: 19 - 25 Aug 2026

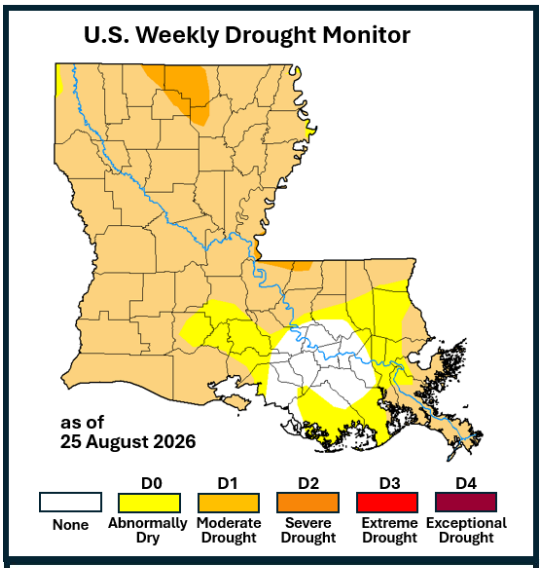

- upper-level ridging over the Rockies and troughing over the eastern U.S. allowed disturbances to move north-to-south across Louisiana
- despite the more active weather, almost the entire state received rain amounts below 7-day normals; portions of western Louisiana received less than 0.25" with some locations receiving no rain (pp. 5-7)
- the continued overall dryness led to widespread degradations per the ***US Drought Monitor*** (p. 3)

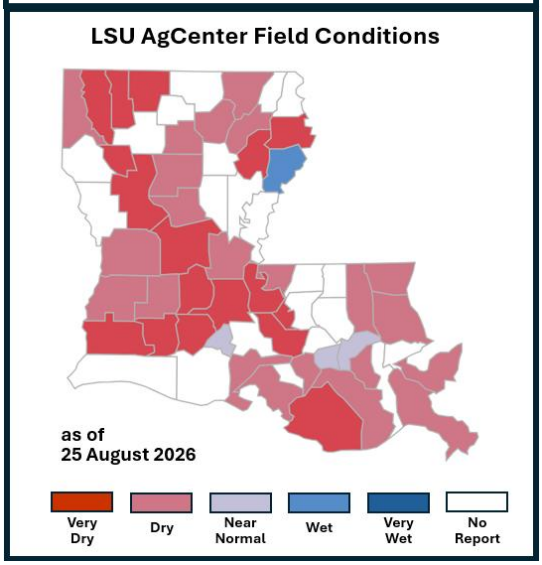

- average temperatures were above 7-day normals across the state despite a general increase in daily storm coverage; temperatures were particularly warm across western Louisiana where conditions were drier
- all but the south-central and southeastern climate divisions had at least one station record high temperatures over 100°F with many sites reaching the 100°s for several consecutive days, including the statewide high of 107°F at SHV Southern Hills on Aug 21
- excessive heat helped in continuing to diminish soil moisture reserves and increase drought coverage (p. 3)

U.S. Drought Monitor (USDM): Issued August 27, 2026

- includes data thru August 25

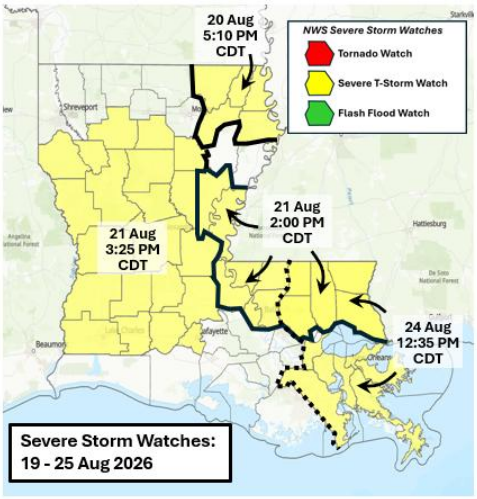

- there was more active weather during this monitoring period compared to recent weeks, but it was not enough to combat excessively hot temperatures that plagued the state for most of it; several locations recorded highs in the 100°s for several days running
- the 'Rapid Onset Drought' or 'Flash Drought', continued to worsen across most of the state; local commentaries note widespread tree stress, pasture grasses turning to dust, and rapid farm pond decline; wildfires are also on the rise
- the new ***U.S. Drought Monitor*** depiction showed degradations across the state, including a significant increase in 'Moderate Drought' (D1) which now covers more than 3/4ths of the state and the most since mid-May; a new area of 'Severe Drought' (D2) now appears across portions of north-central Louisiana, the first D2 coverage in Louisiana since late-June
- As of Aug 25, 17 LSU AgCenter parish agents noted 'Very Dry' with most others noting 'Dry' conditions in their respective parishes; 12 noted that conditions had 'Significantly' degraded in their parishes with another 17 noting that conditions had 'Slightly' degraded
- as of Aug 24, the USDA noted 'Short' or 'Very Short' topsoil and subsoil conditions for 81% and 77% of the state, respectively; pasture and range conditions were noted as 'Fair', 'Poor', or 'Very Poor' for 57% of the state
- 11 more parishes enacted 'Burn Bans' during the period, bringing the total number to 28 as of Aug 25; fire conditions are noted as being 'High', 'Very High', or 'Extreme' for most monitored parishes

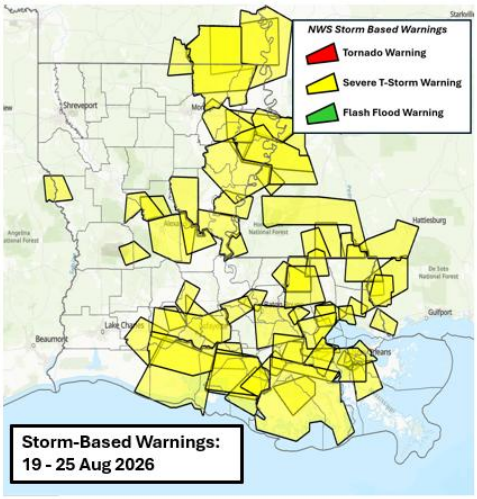

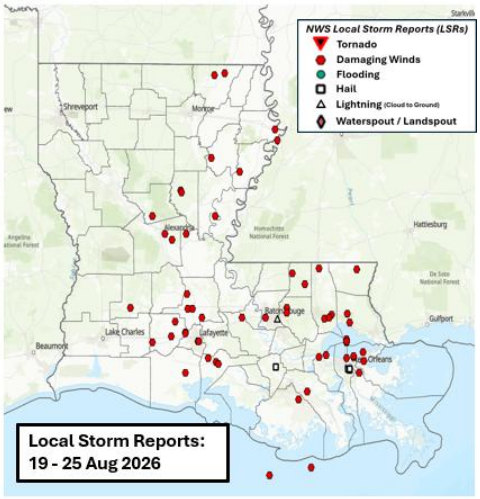

Parish ***Burn Bans*** are issued and lifted by local designated agencies and/or officials. ***Daily Fire Danger*** maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

Severe/Stormy Weather:

Upper-level high pressure was centered to the west of the state which allowed disturbances to ride on the eastern flank and create active weather. *Severe Thunderstorm Watches* were issued on Aug 20, 21, and 24. In total, 91 *Severe Thunderstorm Warnings* were issued during the period with a majority (50+) issued on Aug 21st and 22nd. In response to the heat and humidity, several *Heat Advisories* were issued during the period (not shown). In addition, there were *Extreme Heat Warnings* issued for 6 northeastern parishes for Aug 19, and for the entire state except for the southwestern coastal sectors for Aug 21 (not shown).

In total, there were 78 *Local Storm Reports* received during the period, with the majority also reported between Aug 21 and 22. Among some of the damage reported was a sugarcane field flattened by high winds, an 18-wheeler being blown over on its side by dusty winds along the Bonnet Carre' Spillway, and a lightning-sparked fire in an apartment building near Denham Springs.

Tornado Reports: 19 - 25 August 2026 *(Preliminary)*

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

Prop Dmg: Structural Damage

- Temperature (^{0}F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
