LOUISIANA WEEKLY CLIMATE SUMMARY

Volume 2, Issue 39

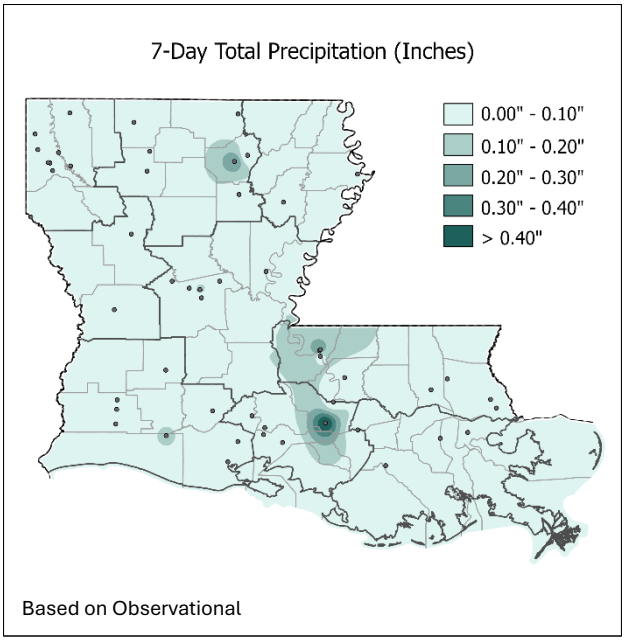

September 23 – September 29, 2026

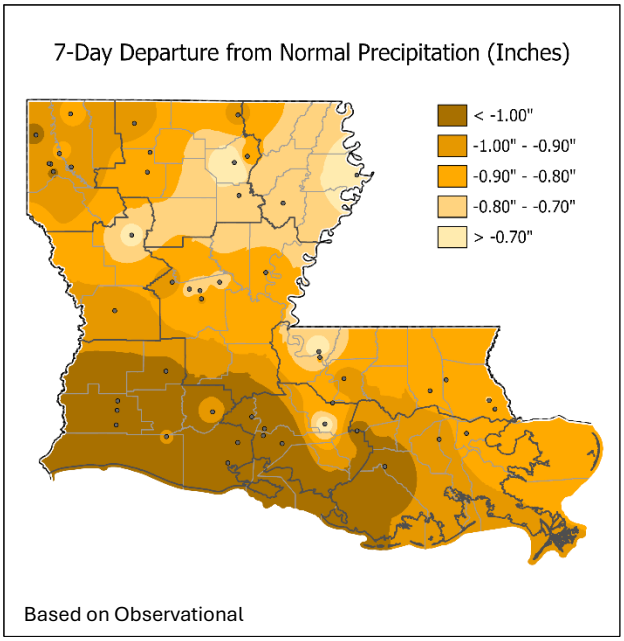

** PROVISIONAL DATA*

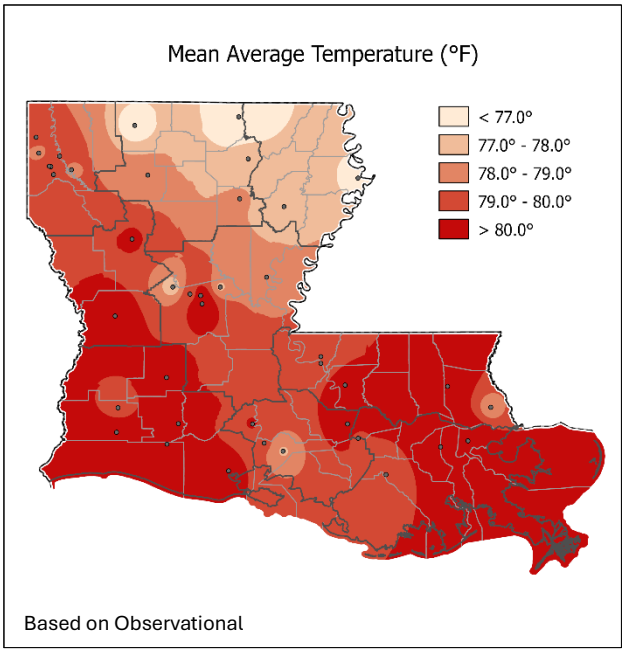

Louisiana Office of State Climatology
Louisiana State University
lastateclimate@lsu.edu
225-578-6870

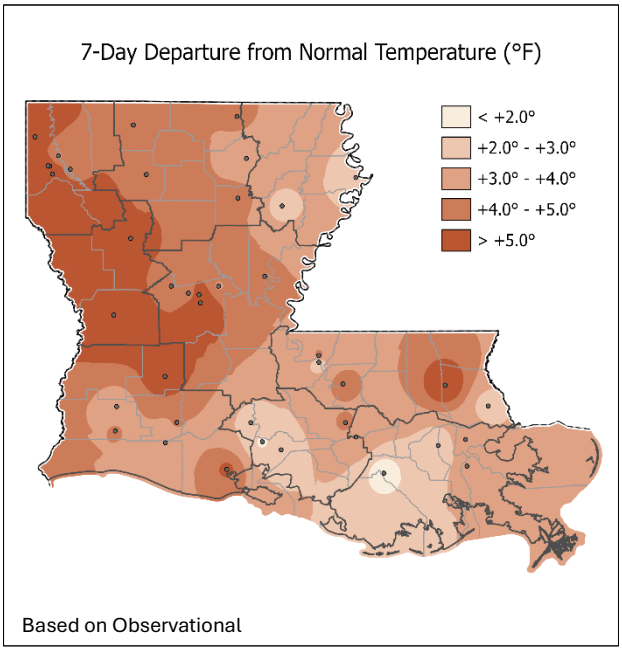

7-Day Accumulated Rainfall & Average Temperatures: 23 - 29 Sept 2026

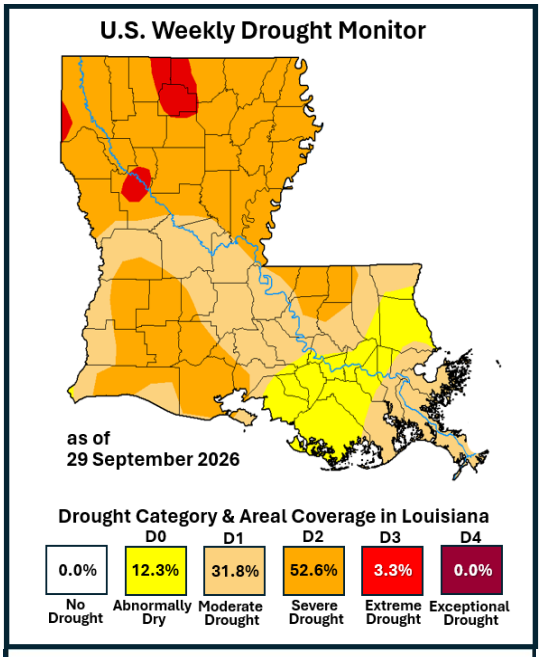

- it was a benign 7-day run across the state as two frontal periods (p. 4) were mostly dry and there were no other systems of note that passed through the state
- many stations recorded no rain during the period (pp. 6-9); due to reporting conventions, some stations recorded rain for Sep 23 that actually fell on Sep 22 which appear in this summary
- the lack of rain along with reduced humidities contributed to drought expansion across the state per the ***U.S. Drought Monitor*** (p. 3)

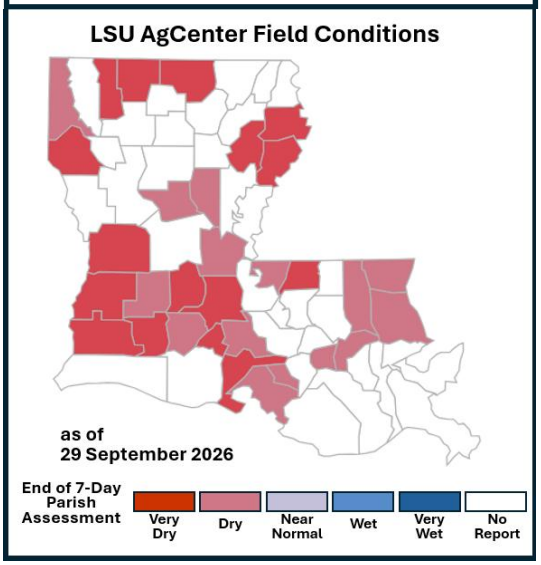

- despite two frontal passages, average temperatures were well above 7-day normals
- those two frontal passages did reduce humidities which allowed low temperatures to reach the 50°s in central and northern Louisiana, including minimums of 57°F at both Homer 1 N (NC Div) and Blanchard (NW Div)
- a handful of sites recorded daily highs of 100°F or more during the period, led by Leesville (WC Div) with a high temperature of 103°F

U.S. Drought Monitor (USDM): Issued October 1, 2026

- includes data thru September 29

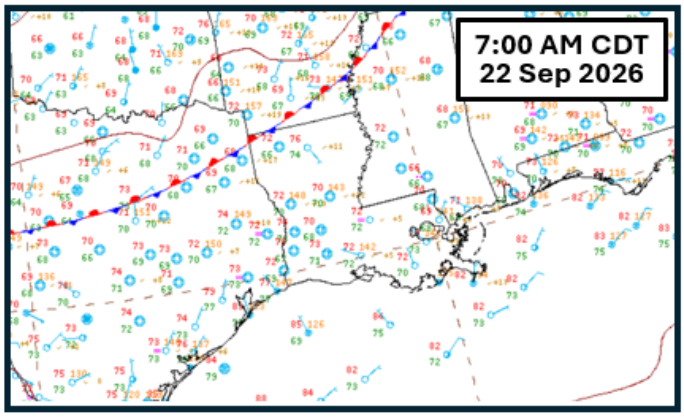

- it was a dry 7-day run across the state with many stations reporting no precipitation and only isolated locations receiving any totals of note
- two frontal passages reduced humidities which dried things out even further; they reduced high temperatures slightly but overall average temperatures remained well above normal
- due to the aforementioned conditions, the new ***U.S. Drought Monitor*** depiction showed widespread drought expansion across the state; over 87% of the state is now in some level of drought, the most since late April
- As of Sep 29, all reporting LSU AgCenter parish agents noted 'Dry' or 'Very Dry' conditions in their respective parishes; the majority of parish agents noted that conditions had 'Slightly' or 'Significantly' degraded during the monitoring period
- as of Sep 28, the USDA noted 'Short' or 'Very Short' topsoil and subsoil conditions for 85% and 80% of the state, respectively; pasture and range conditions were noted as 'Fair', 'Poor', or 'Very Poor' for 63% of the state
- as of Oct 1, most parishes in central and northern Louisiana were under 'Burn Bans'; parish Fire Danger levels were listed as 'High', 'Very High', or 'Extreme' for all but one monitored parish

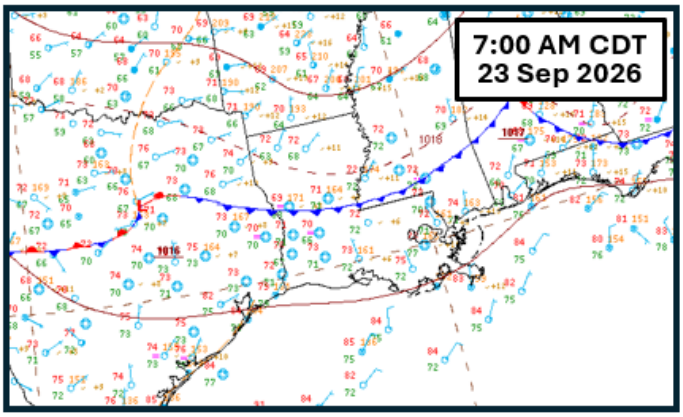

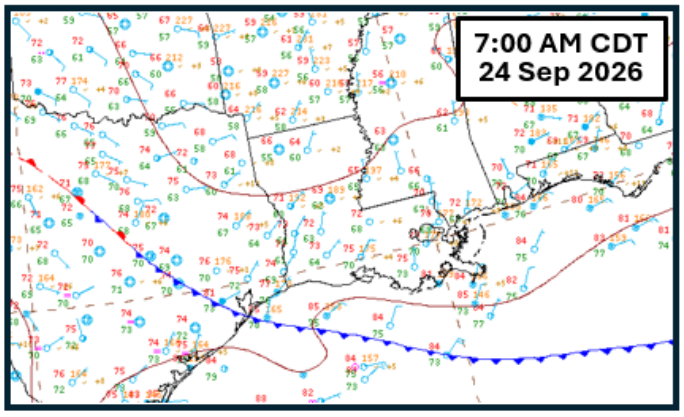

Parish ***Burn Bans*** are issued and lifted by local designated agencies and/or officials. ***Daily Fire Danger*** maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

22 - 24 September 2026:

A 'cool' front slowly worked southward across the Bayou State from the 22nd through late on the 23rd. That boundary failed to produce any significant rainfall, nor did it deliver a significant drop in daytime temperatures. However, the "drier" air mass accompanying the front did bring a welcomed, albeit brief, dip in humidity levels around the state. Dewpoints slipped into the upper 50°s to low 60°s across much of the northern half of the state.

27 - 29 September 2026:

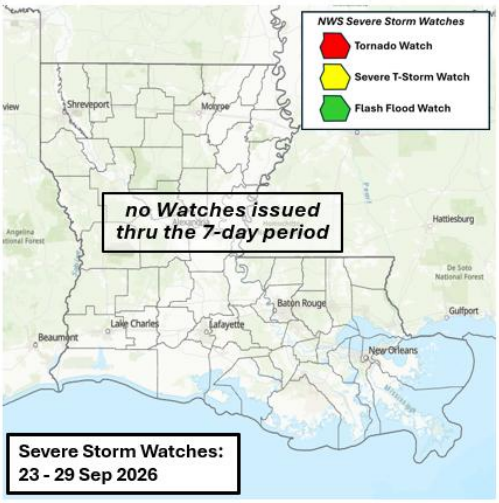

A front near month's end slowly sagged southward, also generating little-to-no rainfall as it passed over the Bayou State. As with the prior front (Sep 22-24), this event did little to keep daytime temperatures out of the 90°s, but it did provide another round of less humid air for many parishes.

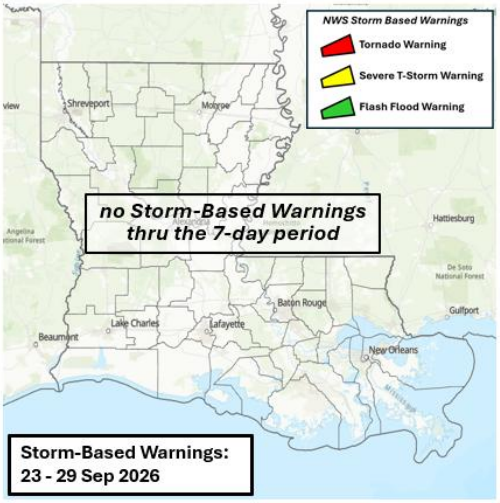

As with the prior frontal passage (Sep 22-24), dewpoint temperatures managed to briefly slip down into the upper 50°s for much of northern Louisiana.

225-578-6870

Severe/Stormy Weather:

Despite two frontal passages, conditions were benign during the 7-day period with little precipitation, much less thunderstorms. There were no *Severe Thunderstorm*, *Tornado*, or *Flash Flood Watches* or *Warnings* issued during the period. Not surprisingly, there were no *Local Storm Reports* during the 7-day run.

Tornado Reports: 23 - 29 September 2026 *(Preliminary)*

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

Prop Dmg: Structural Damage

- Temperature (^{0}F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
